There are two subspecies of African elephants—the Savanna (or bush) elephant and the Forest elephant.

# Access Free African Elephant Ssn

Savanna elephants are larger than forest elephants, and their tusks curve outwards. In addition to being smaller, forest elephants are darker and their tusks are straighter and point downward.

African Elephant | Species | WWF  
Weighing up to 6000 kg (6.6 tons) and measuring up to 3.3 m (10 ft.) at the shoulder, the African elephant is the world ' s largest land mammal. It is characterized by its highly dexterous trunk, long curved tusks, and massive ears. A combination of the upper lip and nose, an African elephant ' s trunk is extremely versatile.

AEC CITES - African Elephant Coalition  
African elephants are of the genus  
Loxodonta (derived from Greek) and  
this includes the two core species; the  
African bush elephant and the African  
forest elephant (which is smaller). 2.  
African elephants can be  
differentiated from Asian elephants  
from their more wrinkled skin, their  
larger size, their larger ears which  
reach up over their neck, their  
concave back (Asian elephants have a  
straight back), and having more rings  
on their trunks.

Elephants - Signature ...

African forest elephants are a bit smaller than their savanna counterpart, and Asian elephants weigh 5,500 kg (about 6 tons) and, at most, are 3.5 meters tall at the shoulder (11.5 feet). All three species have similar sociality, with defined social structures. Herds of elephants are matriarchies, with the oldest female leading the way.
