of the human circulatory system that includes cell-mediated and antibody-mediated immune systems. The components of the human circulatory system include the heart, blood, red and white blood cells, platelets, and the lymphatic system.

Human Circulatory System

hollow tube that carries blood to and from body tissue. Blood transports oxygen, nutrients, carbon dioxide and other materials. open circulatory system. blood flows freely within the body cavity and makes direct contact to organs and tissues. ex. insects, crustaceans.

Circulatory System Study Notes Flashcards | Quizlet

The human circulatory system circulates blood through two loops (double circulation) – One for oxygenated blood, another for deoxygenated blood. The human heart consists of four chambers – two ventricles and two auricles. The human circulatory system possesses a body-wide network of blood vessels. These comprise arteries, veins, and capillaries.
