Examples of Fourier series

This section explains three Fourier series: sines, cosines, and exponentials eikx. Square waves (1 or 0 or –1) are great examples, with delta functions in the derivative. We look at a spike, a step function, and a ramp—and smoother functions too. Start with sinx.lthasperiod2π since sin(x+2π)=sinx.

CHAPTER 4 FOURIER SERIES AND INTEGRALS

The Fourier series for f(t) has zero constant term, so we can integrate it term by term to get the Fourier series for h(t); up to a constant term given by the average of h(t). Since h(t) is odd, its average is 0. The rest of the series is computed below. $h(t) + c = \int f(t) dt = 4 \int_0^t \cos(3t) dt + \cos(5t) + \dots$

Fourier series: Solved problems c

In this section we define the Fourier Series, i.e. representing a function with a series in the form $\sum_{n=0}^{\infty} (A_n \cos(n \pi x / L) + B_n \sin(n \pi x / L))$ from n=0 to n=infinity + $\sum_{n=1}^{\infty} (a_n \cos(n \pi x / L) + b_n \sin(n \pi x / L))$ from n=1 to n=infinity. We will also work several examples finding the Fourier Series for a function.

The function sin (x/2) twice as slow as sin (x) (i.e., each oscillation is twice as wide). In the same way ΠT(t/2) is twice as wide (i.e., slow) as ΠT(t). The Fourier Series representation is. $xT(t) = a_0 + \sum_{n=1}^{\infty} (a_n \cos(n\omega_0 t) + b_n \sin(n\omega_0 t))$ $xT(t) = a_0 + \sum_{n=1}^{\infty} (a_n \cos(n\omega_0 t) + b_n \sin(n\omega_0 t))$

determining the Fourier coefficients is illustrated in the following pair of examples and then demon-strated in detail in Problem 13.4. EXAMPLE 1. To determine the Fourier coefficient a₀, integrate both sides of the Fourier series (1), i.e., $\int_{-L}^L f(x) dx = \int_{-L}^L [a_0/2 + \sum_{n=1}^{\infty} (a_n \cos(n\pi x/L) + b_n \sin(n\pi x/L))] dx$ Now $\int_{-L}^L \sin(n\pi x/L) dx = 0$ and

Most maths becomes simpler if you use ei instead of cos and sin. The Complex Fourier Series is the Fourier Series but written using eiθ. Examples where using ei makes things simpler: Using ei instead of cos and sin ei(θ+φ) = eiθeiφ cos(θ+φ) = cosθcosφ – sinθsinφ eiθeiφ = ei(θ+φ) cosθcosφ = 1/2 cos(θ+φ) + 1/2 cos(θ–φ) dθ.
