Graphs of Rational Functions Date Period

To graph a rational function, begin by marking every
number on the x-axis that is a root of the denominator. (The
denominator might not have any roots.) Draw a vertical
dashed line through these points. These vertical lines are
called vertical asymptotes. The graph of the rational
function will “ climb up ”

4.4: Graphing Rational Functions Practice Date Period

Rational function $f(x) = \frac{1 - x + 4x^2}{x^2 - 2x + 4}$; Steps for Graphing - Step 1: Simplify $f(x)$: if possible, by factoring the numerator and denominator. From the factorization, A) Identify the Domain of the function. B) Note any resulting "Hole(s)". Step 2: Find and plot the x-intercepts and y-intercept of the function (if they exist).

Graphing Rational Functions: Introduction

Graphing Rational Functions with Holes A rational function is a quotient of two functions. The graph of a rational function usually has vertical asymptotes where the denominator equals 0. However, the graph of a rational function will have a hole when a value of x causes both the numerator and the denominator to equal 0.
