Linear Referencing |  
Esri Training ...

A linear reference system stores data using a relative position along existing line features. That is, location is given in terms of a known linear feature and a position, or measure, along it. For example, route I-10, mile 23.2, uniquely identifies a

# Where To Download

position in geographic space, and can be used instead of an x,y coordinate. When data is linearly referenced, multiple sets of attributes can be associated with any portion of an existing linear feature, independent of its beginning and end.

An overview of the

*Page 22/35*

# Where To Download

Linear Referencing  
toolbox | ArcGIS Pro ...

Linear referencing is the method of storing geographic locations by using relative positions along a measured linear feature. Distance measures are used to locate events along the line: Locating a point event and a line event by measures

# Where To Download

along a line

Measurements along features are used to locate point events and line events using a number of conventions.
