Chapter 8. In a right triangle, the sum of the squares of the lengths of the legs is equal to the square of the length of the hypotenuse. A Pythagorean triple is a set of three nonzero whole numbers a , b , and c such that $a^2 + b^2 = c^2$. For example, $3^2 + 4^2 = 5^2$ is a Pythagorean triple. A Pythagorean triple is called primitive if the greatest common factor of a , b , and c is 1. For example, $3^2 + 4^2 = 5^2$ is a primitive Pythagorean triple, but $6^2 + 8^2 = 10^2$ is not a primitive Pythagorean triple because the greatest common factor of 6, 8, and 10 is 2. A Pythagorean triple is called a Pythagorean triple if it is a primitive Pythagorean triple or a multiple of a primitive Pythagorean triple. For example, $6^2 + 8^2 = 10^2$ is a Pythagorean triple because it is a multiple of the primitive Pythagorean triple $3^2 + 4^2 = 5^2$.
