Consummate home cook and magazine editor Suzanne Gibbs shows us how to use a pressure cooker to create slow-cooked flavour in a fast-paced world. Pressure cookers allow us to cook quickly, cheaply and efficiently. The food is cooked in liquid at high temperatures, which shortens cooking time by up to 70 per cent. Because the method seals in flavour and nutrition, cheaper ingredients can be used to great effect. Here Suzanne selects more than 80 of her favourite pressure-cooker recipes, and describes the process from beginning to end. Learn how to cook an osso bucco in 25 minutes, a chicken tagine in 15 minutes and a delicious bread and butter pudding in 20 minutes. Packed with information on practicalities, such as choosing, using and cleaning your cooker, and fully illustrated with beautiful photography. The Pressure Cooker Recipe Book is a must-have guide for anyone balancing the constraints of time and money with a desire to create delicious healthy meals for themselves, their friends and their families.

This paper assesses Lesotho's Third Review Under the Poverty Reduction and Growth Facility (PRGF) Arrangement and Request for Waivers of Performance Criteria. The government has declared a state of famine that is affecting an estimated 900,000 people. One quantitative performance criterion for end-March 2002—the ceiling on the government's domestic financing requirement—was not observed, almost entirely because of delays in external payments. The authorities have requested, and IMF staff supports, a waiver on this performance criterion.

Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.
