I'm about to welcome you into my world. Show you what works for me and share openly what hasn't. I hope that what you find in the pages of this book inspires you to dream up new ways to be kind to people and to think about how the game you're currently playing might be worthy of a bigger court. I hope it stretches your thinking about what's possible, and shows you that when you take giant leaps of faith, the only challenging thing will be some temporary discomfort. Are you ready to wing it? CEO and entrepreneur Emma Isaacs forgot to draw up her life plan, and she doesn't have a list of five-year goals. She doesn't believe in work/life balance - after all she has five children and heads up Business Chicks, Australia's largest community for women. Like Sheryl Sandberg, who told us to 'lean in' to find success, Emma wants to show us that you can't plan every detail and wait for the confidence to kick in before you begin; instead, take action now, do what feels right and figure the rest out as you go along. In other words, you've got to learn how to 'wing it' rather than wait. Drawing on her own life and the stories of the many men and women she has met and interviewed - from Sir Richard Branson to Bill Gates to Girlboss Sophia Amoruso - Emma tells us how to: * Turn a dream into a job * Turn a job into a business * Network like a champion * Protect your time for the things that matter * Get fired up not ground down by the kids/career juggle, and * Understand that sometimes failure is part of the brief. Emma shows us that often the only thing holding us back is ourselves; that you can follow your dreams; and that there's no reason not to start doing so right now. PRAISE FOR EMMA ISAACS "Emma Isaacs is a true force of nature and a role model all women can learn from" Diane von Furstenberg "Emma's energy and enthusiasm for business shine brightly" Sir Richard Branson "Winging It will show you how to map out what's important to you, stay focussed on achieving your goals and thrive" Arianna Huffington

"This book is a comprehensive text for the design of safety critical, hard real-time embedded systems. It offers a splendid example for the balanced, integrated treatment of systems and software engineering, helping readers tackle the hardest problems of advanced real-time system design, such as determinism, compositionality, timing and fault management. This book is an essential reading for advanced undergraduates and graduate students in a wide range of disciplines impacted by embedded computing and software. Its conceptual clarity, the style of explanations and the examples make the abstract concepts accessible for a wide audience." Janos Sztipanovits, Director E. Bronson Ingram Distinguished Professor of Engineering Institute for Software Integrated Systems Vanderbilt University Real-Time Systems focuses on hard real-time systems, which are computing systems that must meet their temporal specification in all anticipated load and fault scenarios. The book stresses the system aspects of distributed real-time applications, treating the issues of real-time, distribution and fault-tolerance from an integral point of view. A unique cross-fertilization of ideas and concepts between the academic and industrial worlds has led to the inclusion of many insightful examples from industry to explain the fundamental scientific concepts in a real-world setting. Compared to the first edition, new developments in complexity management, energy and power management, dependability, security, and the internet of things, are addressed. The book is written as a standard textbook for a high-level undergraduate or graduate course on real-time embedded systems or cyber-physical systems. Its practical approach to solving real-time problems, along with numerous summary exercises, makes it an excellent choice for researchers and practitioners alike.

Written by two of the most respected, experienced and well-known researchers and developers in the field (e.g., Kiencke worked at Bosch where he helped develop anti-breaking system and engine control; Nielsen has lead joint research projects with Scania AB, Mecel AB, Saab Automobile AB, Volvo AB, Fiat GM Powertrain AB, and DaimlerChrysler. Reflecting the trend to optimization through integrative approaches for engine, driveline and vehicle control, this valuable book enables control engineers to understand engine and vehicle models necessary for controller design and also introduces mechanical engineers to vehicle-specific signal processing and automatic control. Emphasis on measurement, comparisons between performance and modelling, and realistic examples derive from the authors' unique industrial experience . The second edition offers new or expanded topics such as diesel-engine modelling, diagnosis and anti-jerking control, and vehicle modelling and parameter estimation. With only a few exceptions, the approaches

Morris Cars 1948-1984 is a handy guidebook to all the Morris cars produced between 1948 and 1984. Morris was a prominent marque in Britain and around the world from the outset of production in 1913. In the postwar era Morris cars were exported throughout the world and many were assembled in overseas plants. Many Morris models retain an enthusiastic following today, even though the last car was produced in 1984. Illustrated in full colour, and with detailed information including colour schemes, optional equipment and technical specifications, this is a complete catalogue of the cars of that era, and will be an invaluable identification guide for anyone interested in these classic British cars. It was written by marque expert, Ray Newell, who has had a long association with Morris Cars, been Secretary of the Morris Minor Owners Club since 1983, and a founder member of the Morris Vehicles Association in 2013.
