An introductory, undergraduate text in general relativity at the junior senior level. The development follows a physics first approach. The simplest physically relevant solutions of the Einstein equation are presented first, without derivation, to be explored and applied to realistic astrophysical situations liike black holes, gravitational radiation, and the beginning of the universe.

Trying to teach undergrads general relativity is about as easy as teaching a puppy... general relativity. Hartle strikes a pretty good balance with this book, offering 30-page chapters with \*gasp\* only a half-dozen equations that focus on conveying high-level concepts as well as chapters fully devoted to tensors, covariant derivatives, and all the mathematical weapons one needs to predict the ...
